

ConnectLine Microphone

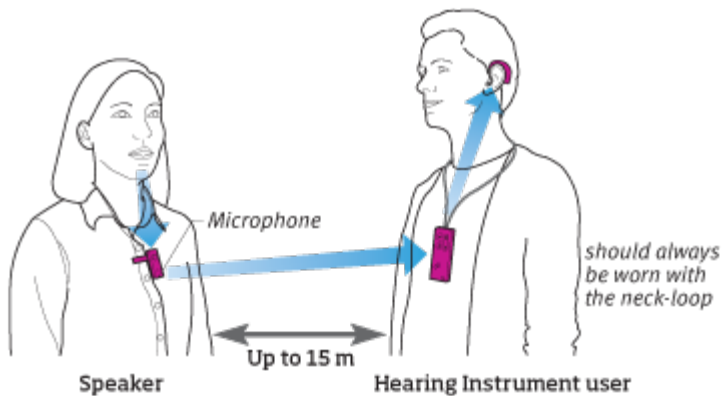

The ConnectLine™ Microphone - For An Intimate Chat

The ConnectLine™ Microphone is a small, discreet wireless microphone that can be worn by the person you're talking to. The microphone transmits their voice wirelessly to your hearing instruments through the Streamer over a distance of up to 15 yards.

The ConnectLine Microphone uses advanced noise canceling technology to help filter out noise in situations where your companion might be far away, your surroundings might be noisy, or both.

How the Microphone Works:

The Microphone will transmit the speech from the Speaker directly to the Hearing instrument user.

Note: A Microphone will only work with one Streamer at a time.
